Exploring the Preferences of Knowledge & Understanding Needs of Secondary School Students

Abdul Ghafoor Nasir and Muhammad Mirza, Ph.D.

Abstract

The present study was designed to identify the Preferences of Knowledge & Understanding needs of students of ages of 14 to 16 year that may influence curriculum development for classes (IX & X) of the schools located in the district Faisalabad. The data were collected from 10% of students of urban & rural secondary schools. So, the total strength of students of sample of urban secondary schools was 248 and rural secondary school was 198. The total strength of students of the sample was 446. Questionnaires were used as research instruments. Because there was no adequate instrument to measure the importance, existence, availability or non-availability of students needs, a self-Reporting rating scale (SRRS) was developed. This instrument included items constructed on the basis of likert scale. This measure was to ask the respondents to respond to a series of 20 items by indicating their level of satisfaction on a five point scale from “Strongly agree” to strongly agree” to “strongly disagree”.

Keywords: Exploring the preferences of knowledge & understanding needs, curriculum development.

Introduction
To derive a set of student’s preferences of knowledge & understanding needs for the study, researchers drew from a variety of studies and psychological theories. A list is given below:

2. Doane’s study of needs (1942:43-44).
3. The Commission on Human Relation Study (1942) which depicted a list of adolescents through case studies, interviews and observations.
6. Havighurst’s (1950:1-4) developmental tasks which were derived by a Committee of the Association for Supervision and Curriculum Development (1950) in America.
7. Lurry and Alberty (1957:60) have listed sixteen areas, which they consider adequate and representative of the common needs of the youth.
10. Bloom (1956:1-4) and Krathwohl (1964) analyzed the cognitive domain and affective domain and psychomotor domain for knowledge and understanding perception.
11. Kennon, M. Sheldon, Andrew, J. Elliot Youngmee Kim (2001:325) who compared three studies of 10 candidates’ psychological needs in an attempt to determine which are truly most fundamental for humans.
13. Sand (2000:193) denoted that affiliation refers to the needs to connect and relate to others.
14. Reid Hastie and his associates (2005:494) who viewed of mutual decision, love, and understanding as developing majority of the rules focusing upon belongingness needs and democracy.
15. Manas Ray (2006:36-37) who presents the social development of the individual according to his social needs.

The question raised for this research is:

What are the student preferences of “knowledge & understanding needs” which may serve as pre-requisites for the successful development of curriculum?
subject to perfect one’s behavior according to the measure of home, society, nation and the world.

**Statement of the Problem**

This study was designed to identify the preferences of knowledge and understanding needs of boys of ages 14+ to 16+ years that may influence curriculum development for classes (IX & X) of the schools located under the jurisdiction of Board of Intermediate & Secondary Education Faisalabad.

**Method**

The study was conducted on the basis of cross-sectional survey research. The data were collected from 10% of students of urban & rural secondary schools. So the total strength of students of sample of urban secondary schools was 248 and the total strength of students of sample of rural secondary school was 198. The total strength of students of the samples was 446. Because there was no adequate instrument to measure the importance, existence, availability or non-availability of students needs, a self-Reporting rating scale (SRRS) was developed. This instrument included items constructed on the basis of likert scale. This measure was to ask the respondents to respond to a series of 20 items by indicating their level of satisfaction on a five point scale from “Strongly agree” to strongly agree” to “strongly disagree”.

**Results**

The frequencies of responses to each item were calculated with item percentages. Means were computed for responses from all the two samples (students of urban and rural secondary schools). As the samples were divided into two groups, correlations among various groups were determined to establish representative ness of the responses and relationship among the groups.

The responses for all items were rank ordered according to their frequencies, means and percentages to determine their importance existence and availability.

Table No.1 Shows that:

Among the students 73.38% agree and strongly agree that they were provided professional guidance.

Among the students 85.49% agree and strongly agree that they knew the importance of balanced diet.

Among the students 58.06% agree and strongly agree but 29.83% disagree and strongly disagree that they knew the rules of first aid.

Exploring the Preferences of Knowledge & Understanding Needs of Secondary School Students
Among the students 82.65% agree and strongly agree that monthly evaluation tests were given to them.

Among the students 94.76% agree and strongly agree that they knew the religious values.

Among the students 93.95% agree and strongly agree that they learnt to achieve their goals.

Among the students 78.63 agree and strong agree but 21.37% disagree that they knew the social values. Among the students 82.26% agree and strongly agree that knew the purpose of life.

Among the students 79.03% agree and strongly agree that they could differentiate rights and duties. Among the students 71.77% agree and strongly agree but 28.23% disagree that they wanted to become citizens of the whole world.

Among the students 84.87% agree and strongly agree that they knew the skill of defense.

Among the student 43.14% agree and strongly agree that but 56.76% disagree that they knew how to save from any disaster.

Among the students 29.03% agree and strongly agree but 70.97% disagree that they knew the wonders of information technology. Among the students 35.08% agree and strongly agree but 64.93% disagree that they knew the traits of democracy.

Among the students 88.71% agree and strongly agree that they sought talented teachers.

Among the students 87.47% agree and strongly agree that they wanted to analyze the every particle of the universe.

Among the students 82.66% agree and strongly agree that they knew the function of computers.

Among the students 85.48% agree and strongly agree that they wanted to learn the skills of defense and raid.

Among the students 83.47% agree and strongly agree that they knew the importance of patriotism.

Now this vast list of Knowledge & Understanding needs is focused to play a pivotal role to achieve a better standard of live, quality education and to play a basic role from awareness to brotherhood in modernization of curriculum at secondary level.

**Discussion**

The findings show that the growth preferences of Knowledge & Understanding needs like contentment, confidence, perception, self-efficacy, prestige, popularity, autonomy, solidarity, and achievement have great values. There is great need of awareness, encouragement and significance of self. The majority of the students of the two samples disagreed that the students have sound sense of self-respect. The majority of the students disagreed that a prize distribution ceremony was held every year in the schools.

The majority of the students were not in accord to the propositions that they felt kinship in the schools. The significant majority of the students differed with the point that they were quite satisfied with their subjects of studies. They were stressed to choose their subjects. In the realm of Knowledge & Understanding needs achievement need has comparatively less mean value and significance need has comparatively high mean score than the other needs.

**Recommendations**

It is concluded that in a learning process the community of the learners had great values. It is the social interaction and commitment to a common purpose that is the glue for the community. Interaction and discussion methods are fruitful for learning and teaching processes. These needs may be given special place in curriculum as shown below:

a. Curriculum may develop or design tasks that may guide the students’ cognitive, affective and psychomotor abilities to award their positive aspects.
b. Curriculum may organize teaching and learning processes in such a way that student’s abilities of recognition, knowing, reasonability, goal orientation, curiosity and exploration may be fulfilled.

c. Curriculum workers may design the subject matter in such a way that it may provide professional guidance to the students, which may create curiosity, enlightenment and identification of social values, moral values and progress in science and technology.

d. Curriculum may create a need for knowledge, not just supply it. It may also develop the ability to think rationality, to express clearly, to read and listen understandingly and to do effectively.

Curriculum may help to make career choices for the students. It may systematically co-ordinate the schools, family and community resources to facilitate each individual’s career potential.
